SUMMARY

Agentic AI Engineer with 2+ years building production RAG systems, multi-agent LLM workflows, and scalable async Python backends for telecom automation. Specialized in LangChain, LangGraph, FastAPI, and hybrid cloud/on-prem LLM inference. Delivered 45% reduction in manual effort, 35% latency improvement, and ranked in top placements at three major AI hackathons across Google and Microsoft.

WORK EXPERIENCE

Agentic AI Engineer (Associate Software Engineer) — Tech Mahindra Mar 2024 - Present

- Designed an **Agentic RAG system** (LangChain, LangGraph, FAISS/ChromaDB) for automated 3GPP test case generation for a Tier-1 telecom operator, reducing manual authoring by **45%**.
- Built **planning-based reasoning workflows** decomposing complex telecom queries into structured subtasks, improving multi-step LLM inference accuracy by **30%** and semantic retrieval precision by **35%** via topic-segmented embeddings (AMF, SMF, Core Network)
- Developed **Flask backend** orchestrating on-prem LLM inference (vLLM, OpenVINO) and cloud models (Hugging Face, Groq) for concurrent multi-model serving, reducing API cost by **25%**.
- Built a **scalable async Python automation system** (FastAPI, LangChain) for Rakuten, executing O-RAN SARF ID-based lock/unlock workflows via cron — processing **hundreds of tickets concurrently** using async task handling, eliminating daily manual execution overhead.

EDUCATION

2019 - 2023 **Bachelor of Engineering – Computer Science and Engineering**, Mepco Schlenk Engineering College, Sivakasi, Tamil Nadu — CGPA: 8.32 / 10

PROJECTS

1. MeetIQ - Agentic Meeting Intelligence

[\[GitHub\]](#)

FastAPI · LangGraph · Vertex AI (Gemini) · Google Workspace APIs · Cloud Run · PostgreSQL · Docker

- Multi-agent pipeline for summarization, task extraction, and workload-based assignment from meeting transcripts; integrated Google Workspace APIs (Sheets, Calendar, Tasks) for real-time automation. It reduces meeting review time by **70%**. Deployed on Cloud Run with Docker.

2. Hybrid NL2SQL Engine with Semantic Fallback

[\[GitHub\]](#)

FastAPI · LangChain · PostgreSQL · ChromaDB · Python

- Combines SQL structured lookups with semantic vector retrieval (ChromaDB) for context-aware enterprise search; background sync service keeps vector store aligned with PostgreSQL for zero-stale retrieval.

3. AI-Powered KYC and Financial Credibility Assessment Platform

[\[GitHub\]](#)

Flask · Azure AI Document Intelligence · Azure OpenAI · Azure AI Search · Azure Blob Storage · Python

- End-to-end KYC automation with OCR, tamper detection, hybrid vector retrieval, and Azure AI risk assessment — built and deployed on Azure in 4 days, generating downloadable PDF credibility reports.

SKILLS

AI & LLM	LangChain, LangGraph, Microsoft AutoGen, HuggingFace, Prompt Engineering
Inference & Cloud AI	vLLM, OpenVINO, Groq, Gemini, Vertex AI, Azure OpenAI
Languages & Backend	Python (Advanced), FastAPI, Flask, REST API Design, Async Programming
Frontend	HTML, JavaScript (Basic)
Cloud & DevOps	Google Cloud (Cloud Run, GCS), Azure, Docker, Git
Databases & Vector DB	FAISS, ChromaDB, PostgreSQL, MongoDB, MySQL, Redis
Problem Solving	DSA — 500+ LeetCode problems

ACHIEVEMENTS & CERTIFICATIONS

- **Top 50 / 18,000+ participants** — Hack2Skill × Google Cloud APAC Hackathon; built MeetIQ Agentic Meeting Intelligence; awarded **\$1,100 GCP credits**
- **3rd / 80+ teams** — Microsoft × Tech Mahindra Ideathon (Agentic RAG system)
- **6th Place Solo** — Microsoft Agentic AI Hackathon (Automated RFP Analysis Agent)
- **Highest Performance Rating** — Two consecutive years at Tech Mahindra
- **Microsoft:** Azure AI Fundamentals · **Oracle:** OCI Generative AI Professional · AI Vector Search Professional · **Google:** AI Whitebelt (GenAI & GCP) · **Cisco:** AI Technical Practitioner
